November 23, 2012, 10:38 am -- /[EPR NETWORK](#)/ -- Capital Online have pleasure in supplying the Green Power Dry Steam Cleaner which has a great advantage of filling an unfulfilled niche in the cleaning market place. Unfortunately in the cleaning business it is almost impossible to fill the cleaning market with a one size fits all machine and so the usual case is that sometimes there is a requirement for a range of equipment items in order to fully satisfy the requirements for a superb clean. The Green Power Dry Steam Cleaner is one of those pieces of equipment being a hand held small nozzled machine built specially to carry out its work in those areas which require small concentrated work areas and where it is impossible to use a large machine.

Capital Online supply already a nice line of large [steam cleaners](#) which will bottom clean large areas quickly and efficiently but any large building has small areas where the larger machines cannot get. This is particularly relevant to bathrooms and washrooms where there is a desperate requirement to obtain top of the range cleaning in difficult small spaces and niches. Places like around the toilet bowls or in the corners of shower cabinets are particularly vulnerable. Kitchens can also be places of serious risk of infections that require the best available cleaning equipment and techniques. Capital Online are also note that the unit is ideal for removal of chewing gum which is one of the worst problems that can be found in any cleaning system. The [Green Power Dry Steam Cleaner](#) is ideal for spot deposits of chewing gum as it lifts the gum by heating it and letting it gently peel away from the source of the deposit ready for disposal while leaving the base material undamaged.

Capital Online is particularly pleased with the operating cycle of this unit as it can be readied for usage in a very short time. This is ideal for a unit, as basically the steam cleaner can be left in storage until required by the operator. The unit takes approx. 20 seconds to heat the 500 ml of water that it uses to reach temperature of 120 degrees C which is the standard operating temperature of the Green Power unit. This start up time means that there is no demand for the unit to be filled and ready to go at all times although anticipation can remove some of the delays, certainly in can be readied and used in a matter of minutes. The temperature of 120 degrees C is such that it kills germs and bacteria and this has to be a major plus in the scheme of things and it is also ideal for serious spot and chewing gum removal which it does without any damage being done onto the carpet, rugs or upholstery on which it is found.

Capital Online - <http://www.capitalonline.biz> - is delighted with this unit as it gives a completely different approach to the cleanliness and working practice and can deal quickly and effectively with the small areas that make or break a good cleaning practice.
