Press Release Summary = Eastern Refinishing - Bathtub Reglazing Specialists Introduce Hot Tub, Spa and Swimming Pool Restoration

Press Release Body = Boston, MA
(PRWEB) April 28, 2007 -- Eastern Refinishing Inc., the largest bathtub and tile refinishing company in North America, has operated for nearly 35 years, with the current ownership being 17 years. The business has representatives servicing most of the USA, with office locations in Boston, Buffalo, Connecticut, Portland, Sacramento, Phoenix, Oklahoma City, New Orleans, Florida, Atlanta, South Carolina, Nashville, Detroit, Virginia Beach, Richmond Virginia, Maryland, New Jersey, Chicago, Milwaukee, Rhode Island, Rochester & Wilmington Delaware.

Eastern Refinishing has again expanded its product line, this time to include hot tub, spa and swimming pool restoration. Different swimming pools are painted with different coating systems, and these various systems can be incompatible with each other. Attempts by

other companies to sell an all-inclusive pool paint have typically met with poor results. Hawk Laboratories, an industry leader in refinishing products, which Eastern Refinishing uses exclusively, has used its extensive knowledge database to develop an array of premium pool, hot tub and spa refinishing products to suit any application.

CRP-12™ is a premium quality, chlorinated rubber based coating system designed to be applied to new concrete and gunnite, and surfaces previously coated with a chlorinated rubber-based product. Hawk CRP-12™ is a truly high performance product, giving the maximum durability and long lifespan required of commercial, hotel and apartment building swimming pools.

FIBERBOND 5000™ is the toughest, longest lasting epoxy coating in the industry. Hawk FIBERBOND 5000™ is a two-component, satin finish, extremely high build coating system that will give unmatched performance on the most difficult surfaces, including water slides, and wave pools, where durability is a necessity. Ideally suited for fiberglass surfaces that need to stand up to abrasion and need constant U.V. light protection in demanding situations such as water slides.

SPA-COTE™ is a premium, low-build, high gloss epoxy coating system for use below the water line. It performs well on spas, hot tubs, and therapy pools, as well as surfaces that have been previously painted with an epoxy coating. This tough durable finish is designed for constant immersion and is available in a wide range of colors.

LP-14™ Water-Based Latex Pool Paint is the economical choice for light duty usage, and applications that prohibit thorough drying of surfaces before painting. This is an easy to apply, medium duty

coating system designed to last several years. It gives the benefit of a very short return-to-service time, excellent for application during the swimming season, when downtime is a critical factor. It's also great for concrete decks, walkways and outdoor fixtures.

If you own a hotel, motel or apartment building, Eastern Refinishing can refinish your pool(s), tubs, sinks, countertops, ceramic tile, concrete surfaces and just about anything else! ER also does residential work covering most of the continental U.S.

Owner of Eastern Refinishing, Charles Gayler, has worked with the industry's leading manufacturer, Hawk Research Labs - Wood Dale, Illinois to develop a complete proprietary line of professional refinishing products. Utilizing a proprietary Acrylic urethane Coating System, Eastern Refinishing has taken longevity to new levels by being able to offer 5 year warranties on all refinished tubs. In fact, you can expect extended refinishing lifespan of between 10-12 years with proper care.
