

# Online Poker Players capable of Cheating with new PokerRNG 6.0 software

Released on = August 9, 2007, 11:23 am

Press Release Author = Peter Drake

Industry = [Software](#)

Press Release Summary = **Poker Players have the ability to see upcoming cards and opponents information**

Press Release Body = New Jersey, United States, August 9, 2007 - **PokerRNG.com** announced today the new release of their poker software program **PokerRNG 6.0**, the software that claims it is capable of viewing upcoming community cards as well as opponents card information on a wide

variety of Texas Hold Em poker rooms.

*"PokerRNG 6.0 is truly capable of deciphering the online poker room random number generators. It has been found that online poker rooms need to generate card values on a fair and equal level. Can you imagine if while playing Texas Hold Em, the poker site continually*

*deals out the same cards? Poker sites have to make sure all cards look random, whether they actually are is a completely different story. This is where PokerRNG 6.0 comes in and calculates upcoming cards based on this principal."*

**PokerRNG.com** has also supplied proof that their software works just as they claim, as seen on YouTube and **PokerRNG.com**, the video displays **PokerRNG 6.0** being used with the popular Poker Stars poker software displaying card values before they are dealt.

*"There's no doubt that the software works as claimed. After all, the poker room is using a digital deck of cards. In this day and age there's a will and a way when it comes to electronics especially when money is involved. This has been proven with every aspect of digital devices, online gambling is no exception. For now I'll just stick to brick and mortar casinos where I can avoid losing to a player who is using PokerRNG 6.0."*

**Lasky Systems**, the creator of **PokerRNG software**, have examined over 10 million hand histories from various poker sites over the years. Using statistics and advanced algorithms they have been able to pin point how to calculate upcoming cards in online poker rooms. **PokerRNG 6.0** is over 4 years in the making because they are a very dedicated team. This project has been around for years now and will continue to be supported in the future.

Recently, online poker players have been polled to show how many players believe there is something fishy with online poker. The results show that over 80% of online players believe that there are some unseen events taking place.

*"There just hasn't been enough proof up until now that this was an actual possibility. Years ago there was an exploit on a well known poker site that was quickly covered up. Now years later we see this same type of thing happening. Only this time it will be a lot harder to stop players from seeing upcoming cards unless online poker rooms start using real decks of cards shown through a video feed. That is about the only option they have to defeat the PokerRNG 6.0 software. Using computer generated cards is not going to cut it anymore."*
