Press Release Summary: Invisalign braces and other treatment plans including Damon brackets and traditional braces now available in Beverly Hills and Encino.

Press Release Body: The popular and invisible way to correct crooked teeth using the Invisalign system of invisible aligners is now available to our patients at both Los Angeles locations; Beverly Hills and Encino. With the ability to correct anyone's teeth, from adolescents to adults, without noticeable metal braces, a perfect smile that you can be proud of is now a reality.

Dr. Sid Molayem, a board certified orthodontist, is excited to offer

this new line of treatment to his patients. The **Invisalign system** is used by leading dentists and orthodontists to slowly straighten your teeth over a period of six months to a year and is virtually invisible. Instead of traditional metal braces, that can injure the lining of your cheeks, the Invisalign system utilizes a series of transparent plastic aligners that are removed whenever you eat, brush, or floss your teeth.

The **Invisalign treatment program** can be used to correct many conditions.

Orthodontists and dentists have found it especially helpful to correct crowded or spaced teeth, as well as treat cases of underbites, overbites, and crossbites. Since the Invisalign system is virtually invisible, it is an especially good choice for anyone who is avoiding orthodontic treatment due to the aesthetics of metal braces. Since the aligner is removed when eating, brushing, or flossing, it eliminates the difficulties associated with oral health that metal braces often create.

The aligners are used in a series, with a new one produced every four weeks. Each one moves your teeth a bit closer to the perfect smile you've dreamed of, and each is designed with computer accuracy especially for you.

Dr. Molayem will take an impression of your teeth and design a treatment plan that is unique for your mouth and desired results.

Before Invisalign

After Invisalign

If the **Invisalign system** cannot be used to achieve your perfect smile, **Dr. Molayem** can still help you. He can provide either traditional metal braces, which may be more suitable for adolescents or clear braces, which are much less noticeable and more aesthetic.

To see which treatment program can help you, and anyone, from children to adults can now benefit, please contact us today to arrange for a free orthodontic consultation. It won't cost you a thing to see if we can get you proudly smiling!
