

# Aeris Adds Advanced Metering Infrastructure Content to Website; Discusses Economic and Environmental Benefits

Released on: May 6, 2008, 8:37 am

Press Release Author: [Aeris Communications](#)

Industry: [Energy](#)

**Press Release Summary:** Aeris Communications added an article reviewing smart energy solutions to its Website. The article provides an overview of Advanced Metering Infrastructure (AMI), an "intelligent" technology that includes metering systems capable of recording and reporting energy consumption and other measurements at more frequent intervals than the typical billing cycle (usually monthly). The full article is available for viewing at <http://www.aeris.net/articles/advanced-metering-infrastructure-ami.html>.

Press Release Body: San Jose, Calif. – May 6, 2008 – **Aeris® Communications**, the leading wireless communications service provider dedicated exclusively to the **Machine-to-Machine (M2M)** and telematics marketplace across North America, today announced the company has added an article reviewing smart energy solutions to its Website.

The article provides an overview of **Advanced Metering Infrastructure (AMI)**, an “intelligent” technology that includes metering systems capable of recording and reporting energy consumption and other measurements at more frequent intervals than the typical billing cycle (usually monthly). The full article is available for viewing at <http://www.aeris.net/articles/advanced-metering-infrastructure-ami.html>.

Readily deployed over wireless networks, advanced metering technology will work with today’s energy sources (gas, water, electricity) and provides answers for management and conservation of future renewable energy grids. Through the use of **AMI**, development and management of new power markets promises both a brighter and greener future for all involved in the energy equation.

The article provides an overview of current and future uses of **AMI** and provides details about the benefits of implementing **AMI** including improved network reliability and system responsiveness as well as increased meter functionality. The article also outlines economic and environmental efficiencies.

**About Aeris Communications, Inc.**  
**Aeris®** is the leading wireless communications service provider dedicated exclusively to the **Machine-to-Machine (M2M)** and Telematics marketplace across North America. Aeris has assembled and seamlessly integrated its top tier carrier partner networks through **AerFrame™** to provide customers with simplified, unified, reliable, and even customized network services for **M2M** and Telematics applications. Since 1992, Aeris has developed expertise and patented technologies now proven on millions of devices and billions of messages per year. **Aeris** provides expert services, superior reliability, broader coverage, lower latency, and unsurpassed customer support and managed services.
