Press Release Summary: New Green Creation Designed For Natural, Organic Do-It-Yourself Gardeners And Farmers

Press Release Body: A recent comment about Ladybugs from a Master Gardener “One common control we all recognize is the use of lady beetles to feed on aphids. The only problem here is when the lady beetles rid branches or leaves of all the aphids, they leave for greener pastures.” my research shows that yes Ladybugs do migrate at the end of the summer/early fall, but if the Do-it-your self farmer/gardener can improve the stay of their friendly Ladybug herd by providing them a nesting box, home or house. They

eat other insects besides aphids like: plant lice, whitefly and scale insects. Two years of research show that most ladybugs leave to look for a home they make home from a squirrel hollowed out hole in a tree where they become pray from birds. I have had good luck with a house designed for the **Convergent lady beetle, Scientific name: Hippodamia convergens** which is native to California. **The Best Lady Bug House**

takes in consideration of their basic needs: Location, Food, Shelter, Protection, and a nourishing Environment.

The Best Lady Bug House measures 5 inches wide, 7 inches tall and 3 inches deep. Painted white and constructed out of wood, the product is weather resistant and features a piano hinge roof for easy spring cleaning and for easy access to check out your favorite herd of lady bugs.

The Best Lady Bug House product was researched and designed for the Convergent lady beetle. Its scientific name is *Hippodamia convergens* which is native to California. Each house comes with information and basic instructions on how to slowly introduce your new herd of adorable bright red/orange lady bugs to your garden and their new home. Lady bugs have been known for their feeding frenzy, eating the insects that feed on your roses or garden.

"The do-it-yourself gardeners have been using lady bugs for a while now as a safe organic means of pest control," said Pavon. "This is a new method of farming and gardening, using natural predator-prey introduction vs. chemical means for pest control."

For more information, or to order the new **The Best Lady Bug House** product, please visit the web site: <http://www.thebestladybughouse.com>. For a limited time, free shipping will be offered for those customers who buy two or more of the product when they choose US Parcel Post. The site utilizes Flash technology and features flash lady-bugs flying in the house, while offering more insight into this new natural organic farming using natural predator/prey. The web site also provides links for those interested in purchasing lady bugs online by several different suppliers. Buyers can be assured their online orders will be secure, as the Website uses a certified shopping cart for credit card purchases. The promo has already been shot and will be shown on Kron 4 TV Henry's Garden soon and advertised on local radio and newspaper also and the web site has received high traffic.
