Press Release Summary: Silynx Communications, Inc., developer of the combat proven QuietOps™ headset system widely used by US, NATO and Israeli Special Forces and part of the Future Force Warrior program will launch the C4OPS™ GenNext headset system during the Special Operations Forces Industry Conference May 20-22, in Tampa, FL.

Press Release Body: **Silynx Communications, Inc.**, developer of the combat proven **QuietOps™ headset system** widely used by US, NATO and Israeli Special Forces and part of the Future Force Warrior program will launch the **C4OPS™ GenNext headset system** during the Special Operations Forces Industry Conference May 20-22, in Tampa, FL.

With GPS functionality and tough 20m immersibility for maritime operations – the **C4OPS headset system** is packed with state of the art technology and capabilities.

GPS NAVIGATION AND FORCE TRACKER

The **C4OPS** is first and only combat headset system able to provide GPS and force tracking capabilities to the dismounted soldier. With its built in GPS receiver the **C4OPS** locates the soldier's position and helps them navigate to the target via voice prompt indications. The operator's location is transmitted securely through the tactical radio.

SMART

Provides automatic hearing protection against impulse and steady state battlefield noise. The **C4OPS** self adapts to external noise and provides hearing protection based on the type and level of noise.

VERSATILE

The **C4OPS** is interoperable with the majority of tactical radios and intercom systems. The system allows the operator to monitor and control two radios, computer and/or an intercom system simultaneously.

EASY

An intuitive man-machine interface provides audible voice prompts indications on headset mode status, radio channel number and other system features. Voice prompts alert the user if a proper earplug seal was achieved to ensure optimal hearing protection.

TOUGH-20M

IMMERSIBLE

C4OPS was designed to withstand the harshest operational environments from HAHO/HALO to combat maritime operations in depths of up to 20m immersible.

DUAL

WIRELESS

PTT

(DWPTT™)

Mounted on the picatinny rail of the weapon the DWPTT allows the user to PTT, remote control the channel and volume of the radio while keeping their hands on the weapon.

C4OPS -The ultimate tactical headset for today's Special Forces.

About

Silynx:

Silynx Communications, Inc. is a world leader in miniature, software-defined tactical hearing protection communication headsets. **Silynx** specializes in the design, development and manufacturing of

advanced and innovative software based noise protection communication headsets that provide Special Forces with an unparalleled operational edge while enhancing survivability, lethality and situational awareness. Find **Silynx** online at www.silynxcom.com.
