Max Garkavtsev, Founder of Software Testing Company BugHuntress QA Lab: 'Test That You Get All From IT Outsourcing'

Released on: July 25, 2008, 2:24 am

Press Release Author: **BugHuntress QA Lab**

Industry: [Software](#)

Press Release Summary: Max Garkavtsev, Founder of the software testing company BugHuntress QA Lab, will represent new QA and testing services which are aimed to help software companies get maximum return in IT outsourcing projects.

Expert-level software testing – for your software **Success**

BugHuntress QA Lab offers software testing services with the focus on embedded, mobile, Web 2.0, e-Business, and security applications. Our 7-year hands-on experience, strong engineering background, innovations and automation tools, and creative problem-solving approach - all this is aimed to help our clients to succeed with their software in the market.

Press Release Body: **Max Garkavtsev, Founder of BugHuntress QA Lab**, a leading Ukrainian software testing company, has arrived in the USA for a two-month business trip with his main goal to present new testing services for technology and software companies.

Special focus is made on integrated QA/QC services for companies which outsource software development. *"The economic slowdown compels to optimize outlay. Outsourcing deals aren't an exception: you must be sure that every your outsourced dollar works at 100% and you get the quality you paid for,"* says **Max Garkavtsev**.

The situation becomes more acute due to a global character of economic uncertainties. Their reflection on the largest outsourcing locations, coupled with rising IT wages and high staff attrition, hurt the quality of outsourcing

delivery in the first place. **Max Garkavtsev:** *"To minimize these outsourcing risks we propose efficient QA 'tools' for vendors control and management."*

The core of new **BugHuntress** services is independent software testing and QA assessment of subcontractors' work. Independent testing is not only a way "not to put all outsourcing eggs in one basket". The studies show that due to mitigation of outsourced software development and go-to-market risks the costs of independent software testing can be repaid a hundredfold. In combination with **BugHuntress** automated testing on the base of Selenium, TestComplete, Mercury LoadRunner and other industry standard tools it is ever more profitable and ensures high defect coverage and testing effectiveness.

To make **BugHuntress** testing services closer and more convenient for local customers **Max Garkavtsev** considers the opportunities to establish a new **BugHuntress** office in California. Along with the New-York office it will help to represent **BugHuntress QA Lab** on both US coasts.

Max Garkavtsev is planning to hold a number of meetings with interested companies and take part in IT conferences in California. He can be reached at +1(646)498-6441, or through his **LinkedIn profile www.LinkedIn.com/in/Garkavtsev**.
