October 22, 2012, 6:07 am -- [/EPR NETWORK/](#) -- Capital Online supply some excellent steam cleaners, which are ideal for safe and very efficient steam cleaning in a range of businesses and has worked well for many years to achieve the best in the business. Capital Online are pleased to be able to offer 2 particular models from Osprey the manufacturers of steam cleaners. The first is the Osprey Robby 3000 which is a good workhorse model and the second is the Osprey Provap Eco Vap which can either be purchased or rented on contract. The cost of the second steam cleaner is such that it costs in excess of £2,700 and Capital Online realises there is probably a more limited regular usage for this model but it is still ideal for an interval standard clean and so the contact allows usage for the period required. If it is on a continuous contract this is often more useful to the cleaning contractor as the large financial outlay at the start of the work could put an unnecessary strain on finances. The rental system is obviously a good system for the contract cleaner who has a large amount of regular work which can be dealt with on a normal basis and financed out of regular income.

Capital Online is a great fan of good [steam cleaners](#) as this system of cleaning offers a great deal in the effectiveness of the cleaning and also the speed of the operation and it is also very environmentally friendly. The steam is general called dry when there is less than 5 to 6% water content in the steam. This allows good safe cleaning at a temperature of 180 degrees C which kills the germs and removes all the dirt and grime from almost any surface quickly efficiently and without any damage. The amount of water used is very low and there are no detergents used at any one time which makes the whole

operation very environmentally friendly. Care does have to be taken on where a [commercial steam cleaner](#) is used as obviously the high temperatures can damage delicate materials but they are ideal for deep cleaning in kitchens and catering establishments where it removes dirt and grime and fatty deposits and leaves a sparkling surface, it works well on the stainless steel surfaces found in these places.

The steam cleaner is excellent at removing grease and this makes it particularly useful in an industrial application. [Capital Online](#) (<http://www.capitalonline.biz>) particularly like the use of gum removal abilities. This is always one of the more difficult items to remove and one of the most obnoxious items leaving a residue that is sticky and extremely difficult to remove. Provided there is no chance of damaging the material on which the gum has been deposited then the gum can be removed simply and quickly and permanently. The advantages of having a cleaning system which uses little water and no detergents or chemicals will become more important as the rules get tougher and Capital Online is pleased to be at the forefront of reducing the problems.
