October 19, 2012, 3:46 pm -- [/EPR NETWORK/](#) -- Manrose are a company with a good history record in supplying everyday fans for the business and household market place and Lamp Post Electrical Supplies are delighted to keep stocking one of the stalwarts of the extraction fan markets in order to supply this ever changing market place. The Manrose centrifugal fan range has almost become a standard as it is able to deal with waste gases and extraction smells produced in the appropriate places. The centrifugal fan is the major part of this design with a central motor and controller which is built with fans with totally sealed bearing sets which require zero maintenance and bearing supports which last a long time. The centrifugal fan is basically a workhorse of the commercial or household market providing a strong fan which will operate continuously and effectively over many years. The areas where they come into their own are the commercial kitchen where vast quantities of waste gases need to be extracted (although there are smaller areas where they are equally useful).

[Manrose Extractor Fans](#) are recommended by Lamp Post Electrical Supplies as it is designed to aid and work effectively in pushing waste gases over long distances without a severe loss of pressure and therefore a loss of effective waste gas removal. They are very good at overcoming the pressure restrictions that have by nature been built

into bends and grilles that may be inserted over the trunking range without serious reduction in pressure. This is particularly useful in some of the most modern commercial kitchens where the waste gas source is easy to pinpoint but the gases have then to be moved over long distances to extract them from the room. The reasons they have to be moved so far can be many but the usual reasons are that care must be taken not to remove the kitchen smells and then pump them straight outside the room where people are working or where they can percolate into a neighbouring house and remove the problem from one place to a neighbouring area. A failure in this region can bring problems resulting arguments with neighbours and potential guests or even prosecution by the local government officials. Any good workhorse requires a good working life and the Manrose pump has a normal working life of around 40,000 hours, obviously for Lamp Post Electrical Supplies replacement of kitchen extractor fans will not occur overnight but there is an ever increasing market place.

The centrifugal fan is a system that works well from small fans to the very large fans and they are extremely quiet in operation with virtually no vibration problems because of the centrally balanced motor. The smaller fans are aimed at the smaller markets and are aimed at bathrooms and toilets as well as small household kitchens where waste gas extraction is required.

Lamp Post Electrical Supplies - <http://www.lamppostelectrical.co.uk> - are proud to stock a full range of Manrose fans which can be delivered swiftly and effectively to repair breakdowns or deal with pressing problems and will be pleased to offer advice as and when required.
