December 07, 2012, 2:50 pm -- /[EPR NETWORK](#)/ -- The Electrical Counter have built up an excellent range of products to be supplied directly via the internet from their excellent web site, the base of the business is as the name suggests, anything that the electrical trade might require usually, off the shelf. If the product required is not obvious on the web site then an excellent call service will establish whether and when it can be delivered. This is certainly the case with the [Elnur Storage Heaters](#), which The Electrical Counter company is very pleased to supply from its standard in-stock store. This resurgent business in storage heaters has developed because of the inspired development of the latest Elnur Storage Heaters. These Elnur Storage Heaters are now very efficient in energy usage from a low cost electrical source and they come in a range of sizes from 1.7KW to 3.4 KW power rating and also in a range of manual or automatic controls.

The Elnur Storage Heaters are of a superb slim line design that fit very well in any standard room and the small size of the units mean that they do not take up the whole of the wall space. The controls are easily accessible and the units acne work as a stand-alone unit or fixed to link in with other storage heaters as part of a fully controlled central[heating system](#). The Electrical Counter is delighted with the quality of the Storage Heaters and the complete range of manual and automatic units that are available which enable the installer such a wide range of options. The safety systems are such that the Storage Heaters have automatic safety power cut outs when the grills, where

the heat is released, are covered with clothes or other items. The Electrical Counter supply Storage Heaters where there is an automatic control system on the heat input to the heat sink so that just the right amount of heat is input into the storage heater for later usage. Elnur have developed the range of Storage Heaters to meet all occasions and the sophistication levels are now so good that they heat input on the best units is controlled so that it takes account of the weather so that heat is not wasted in periods of warm weather or left short in periods of excessive cold. If this is added to a full central control system the maximum flexibility in heating control is possible, [Hycos Water Heaters](#) are also another great addition to the system in order to maximise your homes overall efficiency.

The Electrical Counter is pleased to note that these units fit extremely well in conditions where there is a surfeit of electrical power from a solar panel system where the daytime electricity is basically the property of the householder during the day and hence is free.

The market is ever increasing and the boiler fuel systems are not only suffering price rises from the energy suppliers but things like gas checks are now advised annually for house owners and are imposed by law on the house rental business. The Electrical Counter notes that the costs of each system when all the equipment costs, energy costs and service costs are taken into account are very close. The Electrical Counter welcomes any enquiries on the use of Elnur Storage Heaters.
