January 15, 2013, 7:47 am -- /[EPR NETWORK](#)/ -- Vitamin C is crucial to a person's health has long been known, but what is less known is the different methods of how it is absorbed into the body.

Some delivery methods are better than others. Citrus fruits, like oranges, do deliver a good dose of vitamin C, but it's not the best way. Most supplements only provide about 16% absorption.

As proven in repeated scientific studies published in peer-reviewed journals, Lypo-Spheric vitamin C has the highest absorption rates of any form of the vitamin. It is available in capsule form from Vitamin

Pros, <http://www.vitaminpros.com/lypo-spheric-vitamin-c.html>.

"After through research we believe Lypo Spheric vitamin c is the best form of vitamin C available today ... the bioavailability of this product far out performs any other product," said Chris Kochan, president of Vitamin Pros.

About 98 percent of this form of the vitamin is absorbed by the body, greatly surpassing all other forms.

That statement about lypo spheric vitamin C is backed up by a study published in the "Journal of Nutritional & Environmental Medicine" in 2008.

Vitamin Pros delivers vitamin C to the body in a liposomal encapsulation system. This capsule system has also been studied by researchers and found to be extremely effective.

"We want to educate our visitors about vitamin C. Lypo spheric prevents the vitamin from degrading. The liposomal system makes sure the vitamin reaches the bloodstream and cell where it can go to work," he said. "You can get vitamin C supplements anywhere, but you will not find a technology that delivers more of this critical vitamin to your body than this form."

Vitamin C is important for wound healing and enzymatic reactions. It boosts the immune system and plays a key part in collagen building. Vitamin C is a first line defense in fighting the common cold. It is a natural antioxidant. For more information visit www.vitaminpros.com/lypo-spheric-vitamin-c.html
