January 09, 2013, 12:42 pm -- /[EPR NETWORK](#)/ -- Electrical Counter is pleased to promote the BG Nexus range of electrical sockets and switches for use both in the house and in the office or work place. The company is particularly pleased to be able to stock a complete range of fittings than cover virtually every eventuality of usage. The [BG Nexus range](#) has been developed to provide a very attractive design finish that will stand out most impressively when fitted into the décor of the building. The Metal Black Nickel finish is a very subtle colour and whilst distinctive it is not an "In your face" finish and will tone into not only a modern finished building but will not be wasted in less contemporary surroundings. The finish of all the metal fascia's is such that they are a polished smooth surface which gives very clean lines and simple finish and they all match a basic standard design with no sharp edges but all rounded corners and sides.

Electrical Counter notes that the system is an ideal one to be used where there is a requirement to keep the whole place clean and within the bounds. The materials of the metal surface are such that they retain their initial properties over a long period and do not deteriorate with time. They are simple and when cleaned with bacterial wipes will remove all bugs that may be transferred to them and they pick up less bugs in the first place as the smooth surface is less attractive to their collection. This makes them ideal for usage in the kitchen or office and they are quite acceptable in places where there is a serious chance of bug and disease transfer.

The full BG range of [switches and sockets](#) have allowed the BG Nexus brand to become a major range of products and Electrical Counter is delighted to be able to stock the full range available for delivery on an immediate call off basis. The Metal Black Nickel range is at present a most attractive range not only because of their design but also because of their price. At present Electrical Counter is pleased to be able to offer the whole range at vastly discounted prices, which makes their usage competitive with some of the cheapest models on sale. Some typical examples show the Metal Black Nickel dimmer switch on sale at £9.99 instead of the usual £31.51 whilst the simple Black Nickel light switch is on sale for £2.91 against a usual price of £14.41. The overall cost of the sockets and switches being in the range 25% to 33% of the original cost.

Electrical Counter have an excellent web site in which all the different ranges of [Nexus metal switches](#) can be seen and if there are any further queries the experience of a well trained staff is available by telephone to answer any queries. Electrical Counter pride themselves on the fact that whilst the internet warehouse provides good quality materials at cheap prices it has also retained the experience essential to run this business and to make sure that it is available to company employee and customer alike.
