Industry: [Food & Beverage](#)

April 15, 2013, 3:33 pm -- /[EPR NETWORK](#)/ -- Laundry 365 were set up to supply all sorts of [commercial laundry equipment](#) by a group of dedicated service people with years of experience in the trade with the added advantage that the service element was supplied 365 days a year. The company has been very successful in its approach and have realised that they have years of experience supplying not only the commercial laundry business but also the service industry as a whole, where that service industry supplies services to people in bulk. To this end Laundry 365 now supply commercial warewashers, which can clean bulk loads of crockery and glasses efficiently and with a high quality finish.

Laundry 365 is pleased to promote the Fagor range of [warewashers](#) and in particular the Fagor AD12BBT warewasher which is a pass-through warewasher meaning that the crockery or glasses are placed into a basket ready for washing. The baskets are then placed in the Fagor AD12BBT warewasher at bench height and are removed at bench height when finished. This means that there is no bending and lifting other than a straight transfer of the baskets and their loaded contents into the warewasher. This reduces any lifting problems that are caused by under counter warewashers and it also speeds up the process. Laundry 365 notes that the Fagor AD12BBT warewasher will efficiently clean some 1,200 dishes per hour ready for re-use. This reduces the amount of crockery and or glasses that are required for the commercial operation of the unit and returns those used back into operation in a very short time. This is ideal for bulk crockery or glass usage operations such as large restaurants,

canteens, schools and hospitals and also cruise ship operations as well as large industrial type food processors.

The [Fagor AD12BBT warewasher](#) is a very simple piece of equipment to use being limited to just three working programmes, which are quite sufficient for virtually any normal operation. The typical working programmes take just 90 seconds or 180 seconds, which takes care of both the fast speed operation for the normal items and a slower more determined cycle which deals with the more difficult cleaning problems. The water temperature is typically 60 degrees C with a rinse cycle temperature of 90 degrees C, which will leave the dishes ready to dry quickly and efficiently. The wares cleaned are ready for putting away into the storage cupboards or can be returned straight into the system for instant reuse if that is required.

Laundry 365 is pleased to note that the unit is made of stainless steel and that all Fagor units come with a great reputation of strength and reliability from many years extensive usage in the industry. The Fagor AD12BBT warewasher has low running costs and is a real workhorse in the kitchen or factory and will delight the user. Laundry 365 will be delighted to advise anybody on the best piece of equipment for their own operation as this comes as part and parcel of the sale.
