Industry: [Electronics](#)

April 24, 2013, 10:35 am -- /[EPR NETWORK](#)/ -- The Electrical Counter has set up its business based on providing the best quality electrical equipment for the electrical installation trade and retail customers at the best possible prices. The recession has hit the building industry exceptionally hard and it is sometimes difficult to see an end to the problems that this situation brings to the market place. However The Electrical Counter have set themselves the target of reducing their prices to such a level that will be able to supply the electrical industry at a price that is attractive to the small and large installations that are beginning to develop in the country. To do this they are working extremely closely with the best manufacturers in the electrical [switch and socket](#) business so that the aims and aspirations of the installers and end users can be fully achieved.

To this effect The Electrical Counter is supplying promoting the B G Nexus range of polished chrome electrical sockets at around 20 to 25 % of its original selling price. The typical [Nexus metal polished chrome 2 gang 13 amp switched socket](#) is selling for £3.89 per unit instead of £19.87 per unit, less than 20% of its original price. This is an ideal socket for the large office or public service building including schools and hospitals but it is also ideal for the family home and the price is such that even a cosmetic change can be considered worthwhile. The Nexus metal polished chrome 2 gang 13 amp switched socket is only one of a range of sockets in the polished chrome set and 1gang 13 Amp switched sockets can be sourced as well as a full range of shaving

sockets, oven and electrical hob fittings and other fittings. This range of [polished chrome sockets](#) can be fitted throughout the building wherever required safely and securely. Electrical Counter also supply the BG Nexus polished chrome 1gang 5amp round pin switched socket for the set of table or pedestal lamp systems, these sockets can be linked together to give a ring main just for the lamp circuit which can be operated from a central switch. These sockets are excellent in appearance and very safe to use, they do retain their original appearance quite easily and will withstand the typical heavy traffic and knocks and bumps which happen regularly in a large operation or a household environment.

The full Nexus polished chrome range can be used throughout a large installation as they manufacture a switch or socket for almost every occasion and the price reductions are reflected throughout the range. The Electrical Counter is extremely pleased to be able to supply the full range of the [BG Nexus](#) polished chrome switches and sockets and can supply them either in individual quantities or in bulk and will do so with a delivery pattern to suit the requirements of the customer. Electrical Counter has a great deal of experience in the business and is only too willing to pass on that advice wherever possible so that customer and supplier can work together to the very best effect.
