

First Ever Dual Screen Super Tablet/Laptop

aurus DIAMOND DUAL 10.1

Released on: May 10, 2013, 6:37 am

Author: **Joshua Letcher**

Industry: [Computers](#)

Fribourg, Switzerland, May 10, 2013, 6:37 am -- /[EPR NETWORK](#)/ --
With an extraordinary prototype for a dual screen tablet/laptop, Allotropes Design is in development of the AURUS Diamond Dual 10.1. In need of funding to bring the ultimate convenience in multi-tasking to the marketplace, the computer is categorized as both a tablet and a laptop because while the design is all laptop, its two screens fully function independently similar to a tablet. "This computer is the only one of its kind in the world." said Joshua Letcher, CEO of Allotropes Design. "We will be the first to offer a computer with two 10.1" touch screens in full HD. Soon people will be able to check their email on one screen and manage their stocks or play a game on the other."

The busy person's dream, the Android tablet/laptop AURUS Diamond Dual 10.1 needs every pledge of support available to bring the idea to the marketplace. In development from the ground up in partnership with manufacturers for the past twelve months, Allotropes Design is now ready to release the product globally.

"We've offered quite a few benefits to the people who pledge to the project. And we will fulfill the Indiegogo pledges first, so supporting us on our crowdfunding page is the best route to take right now to get the AURUS introductory pricing." added Letcher.

While the AURUS is highly anticipated, if sufficient funding is not received it will hit the market at a considerably higher price, at a much later time, with less features and be released to geographic locations.
