May 28, 2013, 11:22 am -- /[EPR NETWORK](#)/ -- Lamp Post Electrical Supplies have built an excellent business by supplying first class electrical equipment, which will completely fit their customers requirements. This has been carried out by using manufacturers who not only supply excellent quality products but also supply good technical advice on the product and its usage. MK Electric is one supplier that fits all these requirements and they are able to supply some of the best consumer units on the market to the exact specification required by the customer.

One example is a standard consumer unit in the MK Electric range which is supplied by Lamp Post Electrical Supplies and this is the MK K7666SP 17th edition consumer unit with basically a 16 way dual RCD (Residual Current Device) set up. This unit can easily be supplied as a single consumer unit with MCB (Mini Circuit Breakers) chosen by the electrician or Lamp Post and MK can supply the advice for the complete specification. If Lamp Post are given the specification MK will design the consumer unit to meet that specification and build it especially within the day for supply by Lamp Post Electrical Supplies the next day. The consumer unit normally requires tailoring to the needs of each individual residence and whilst there are ways in which this can be done just to cover the regulations there are a great number of advantages in setting the systems so that they meet the users exact requirements.

Lamp Post Electrical Supplies can supply excellent advice along with a full range of equipment in the MK Electric Consumer unit range and they are proud to represent one of the major manufacturers of the electrical protection and power distribution systems. The MK K7666SP [17th edition consumer unit](#) is a basic unit but the consumer unit can be used as a

standard system with a dual RCD protection system covering a full range of MCBs but it is often better if some of the outlets are covered in different ways and Lamp Post Electrical Supplies can assist with all the requirements.

There is [a superb range](#) of MK Electric RCD systems that range from block units to individual circuit units. There are a range of RCBO units which usually control just one circuit. This is ideal for consumer units where the household or office want total protection but it really is essential for the individual circuits, which provide power to the safety or certain essential services. This is usually circuits such as fire and burglar alarms and equipment like freezers and refrigerators, which require secure power supplies wherever possible. There are RCBOs which can turn off with say a power cut and not turn back on when power is restored but in most cases these should be avoided in favour of the type that restore power to the circuit when power returns. There is also a range of DIN rail mounted time switches that can be fitted to meet specific remote power requirements.

Lamp Post Electrical Supplies is pleased to supply any of the MK range and if the item is not on the web site an email or a telephone call will resolve the problem.
