June 21, 2013, 11:56 am -- [/EPR NETWORK/](#) -- Express Cleaning Supplies can supply any cleaning equipment from small to large along with all the proper chemicals required for a good operation and quality cleaning with the equipment involved. This equipment can also be supplied at very competitive prices from a company, which has the experience to deal with all cleaning needs.

Express Cleaning Supplies is pleased to be able to supply the Prochem Blazer GT Truck Mounted Carpet & Upholstery Cleaner to the carpet and upholstery cleaning trade. Prochem manufacture some excellent equipment for all sorts of cleaning work but this piece of equipment is designed to meet the needs of the travelling carpet and upholstery cleaner who needs to be totally self-sufficient.

These days even the householder does not want to be inundated with large portable cleaners which take over the house and for a hotel or office complex this is often totally unacceptable as corridors or working space cannot be clogged up even out of normal working hours. The Prochem Blazer GT Truck Mounted Carpet & Upholstery Cleaner is usually mounted in a typical small van with a side door, the cleaning head is attached to a water and chemical supply hose and also a 2 inch vacuum hose and these are fitted to the Prochem Blazer GT Truck Mounted Carpet & Upholstery Cleaner. These hoses are some 250 feet (75 metres) long and can work long distances from the [truck mounted carpet cleaner](#). Setting up for a job is simple and quick and with an extra water tank fitted the unit is totally self-sufficient.

The cleaning chemicals are added to the supply tanks but there is no need for careful measuring and mixing as the machine is set to mix the chemicals automatically. The machine works with a Briggs and Stratton 2 stroke engine and is therefore not reliant on a local power supply.

Express Cleaning Supplies are delighted with the quality of cleaning of the Prochem Blazer GT Truck Mounted Carpet & Upholstery Cleaner as it is very quick in its operation and very effective. The unit works at a pressure of some 300 to 500 psi unlike the smaller units that work at less than 100 psi. This increased pressure gives a much better cleaning, which is maintained at long distances from the van. Being just a set of trailing hoses allows the operator to move freely throughout the home or building complex and the ability to use many different chemicals allows it a full ability to deal with all the different problems that the operator may encounter. The machine can work continuously with no stops required other than enforced ones, it is also able to clean upholstery exceptionally well so that a complete cleaning operation can be carried out at one time. The [Prochem Blazer GT](#) Truck Mounted Carpet & Upholstery Cleaner is a great machine for dealing with large building cleaning as it can reach throughout the building, hoses and gun can be taken up external stairways or through windows to avoid entrance ways and hallways and there is no machine noise inside the building.
