Industry: [Retail](#)

June 20, 2013, 1:22 pm -- /[EPR NETWORK](#)/ -- Splash and Relax are a company that has worked hard to develop a full range of products that will not only cover every sort of leisure activity but will do it at a price that can be afforded by most people. This is due to Splash and Relax working hard to obtain a full range of product within any category so that there is something for everyone. The very name of the company suggests that the water based sports and leisure activities have always been at the forefront of Splash and Relax's business model.

The [swimming pool business](#) is a major part of that area and the company can supply a full range of pools from the typical blow up paddling pool through the inflatable pools and above ground pools to the in the ground models.

Splash and Relax are pleased to be able to provide a great in ground swimming pool that will cost a fraction of that of a fully fitted tiled swimming pool. Splash and Relax are pleased to supply the [Kafko DIY 4 ft Polymer In-Ground Swimming Pool Kit](#) which is basically a DIY swimming pool that most active families can deal with or get a local contractor to erect at a very low price. The in ground swimming pool has always been considered the ultimate in [swimming pools](#) as it fits so well into the standard large garden and can be landscaped with paths and patios to make it the major centre of any garden. The Kafko DIY 4 ft Polymer In-Ground Swimming Pool Kit comes in kit form in various sizes up from 20 ft x 12 ft to 30 ft x 14 ft and at a price range for the full kit from less than £6,000 to less than £8,000 for the largest then comparing this to a price of over £30,000 for fully tiled and fitted swimming pool this unit has some very attractive advantages. The kit

pool will usually take around 7 to 10 days to install whereas the tiled pool will take a good 10 weeks to install.

Splash and Relax are pleased to promote the Kafko DIY 4 ft Polymer In-Ground Swimming Pool Kit and note that the work can be carried out with assistance in a complete do it yourself fashion. The biggest problem is the hole for the pool but a good local digger contractor will deal with that and requires a good base. The Kafko DIY 4 ft Polymer In-Ground Swimming Pool Kit supplies a full framework for the pool with a fully insulation panel wall around and below the pool. The liner is a polymer one which will last about 7 to 10 years but a simple replacement will restore the pool to new. All the cleaners and filtration units come with the kit but there are a great range of extras that Splash and Relax can supply including a serious water heater and good solar covers.

Take a look at the Splash and Relax website and see just how good this swimming pool looks.
