June 27, 2013, 3:00 pm -- /[EPR NETWORK](#)/ -- The Door Store has developed a superb range of doors for all applications which can be viewed on their website and supplied at a delivery time to suit the customer. Their range of internal doors are excellent and in particular their range of Oak Internal Doors.

A great example of the Door Stores range of Oak Internal doors is the JB Kind Yoxall Finished Oak Internal Door which is a superb door fully engineered to a very high standard to give a door which will survive the general day to day activity of any house. The door finish is an excellent Oak veneer which gives the door a very luxurious finish. The design of the is a very simple vertical plank system with a top and bottom horizontal wide oak faced board which with the outer two vertical planks makes a great visual surround to the design. This design of door brings a richness to the house and The Door Store is proud of the effect that a complete range of these doors will bring to the home or office. The range will fit ideally throughout the property and will fit in whether it be in the kitchen, sitting room or the bedroom.

Having a great looking door is one thing having a door which will resist fire for a time and allow the occupants of the property time to escape is a completely different problem and one which the Door Store takes very seriously. The [JB Kind Yoxall Finished Oak](#) Internal Door is just one of the range of internal doors which can be sourced in a fire door specification, in this case to a level of FD30 which means that it has been made to a specification which will allow 30 minutes for the

occupants of the property to escape safely. These doors have achieved the BWF Certifire certificate which has been established by the British Woodworking Federation to testify that these doors have achieved the FD30 or FD60 (60 minutes escape time) requirements under rigorous testing procedures. In this case the JB Kind Yoxall Finished Oak Internal Door has been tested so that it is certain to give that escape time.

It is becoming more common by the day that fire doors are fitted throughout the home particularly for any door that enters or exits the hallway of a property. The Door Store also notes that the fire door must be fitted correctly into a frame with the correct intumescents and smoke seals. The smoke seals stop the major killer in any fire which is the fumes that are generated in a fire and the intumescents stop the flames creeping around the door edges.

[The Door Store](http://www.the-door-store.co.uk) - <http://www.the-door-store.co.uk> - has worked hard to get a safe door catalogue as well as an attractive door range and they have plenty of experience in this area. The Door Store website will give a [full range of oak internal doors](#) but they will be only too pleased to offer any advice on the fire prevention and safety aspects which require to be addressed.
