Industry: [Telecommunications](#)

LONDON UK, July 09, 2013, 2:22 pm -- [/EPR NETWORK/](#) -- 3CX, developer of the award-winning Windows VoIP PBX 3CX Phone System, announces the launch of 3CX Mobile Device Manager version 6.3 which provides unparalleled Android manageability by allowing administrators to remotely configure corporate email, and retain control of the sensitive stored attachments and emails. 3CX DroidDesktop has also been integrated, providing administrators the ability to remote control Android smartphones and tablets.

“Up until now, Android has lacked the management features to control and secure email. Hampered by Android’s inability to manage corporate email, that mantle has traditionally fallen to Blackberry. With 3CX Mobile Device Manager 6.3, businesses can have peace of mind as they can securely and efficiently deploy corporate email as well as delete emails and attachments from Android devices at any point”, said Nick Galea, 3CX CEO.

## **Secure & Manage Corporate Email and Attachments**

3CX Mobile Device Manager incorporates the most popular commercial Android email client – AquaMail, allowing administrators to remotely configure corporate email and retain control of stored attachments and mail. The stock Android email app is very limited, whereas AquaMail provides

administrators with full control over corporate email, without affecting the user's personal emails. Companies can now delete all corporate emails as well as the attachments that are stored on the device when an employee leaves the company. 3CX Mobile Device Manager provides Enterprise-style features for SMBs at a fraction of the cost and administration effort!

## **Remote Control of Android Phones**

3CX Mobile Device Manager has integrated the popular 3CX DroidDesktop Android app, which gives the user remote file management access, allowing them to download and upload files from their mobile device to their computer and vice versa. Stored files on the device can be previewed and the user can use the Delete, Create, Copy and Paste actions for files and folders. This is an excellent feature when administrators need to manage the user's storage space on their devices as they can easily move or delete unnecessary files quickly without interrupting the user. Remote shell access allows the administrator to use commands to access the Android's inner workings and is especially useful for developers as it allows them to fix devices remotely. Administrators can also view the device system logs keeping a close eye on what actions the device and applications are running, which is very useful for debugging or tracing the source of problems.

## **Try 3CX Mobile Device Manager for Free with a 5 Device Account**

Experience all the features of 3CX Mobile Device Manager by signing up for a FREE 5 device account! Signing up is easy and only takes a few minutes. Read the step by step guide on how to get started and the 3CX Mobile Device Manager user manual. The 3CX MDM pricing can be seen here.
