September 25, 2013, 2:23 am -- /[EPR NETWORK](#)/ -- The Electrical Counter is very pleased to supply the Retrotouch RTS Touch and Remote Light Switch to the electrical market for installation into the home or office. This switch is something completely different from the normal light switch and is certain to be an item that will flourish and most likely will provide an insight as to where the next expansion in the market will occur. The starting point is that this switch will provide a completely different appearance from the standard switch with a 1, 2 or 3 gang switch being able to operate up to 3 different circuits at a time either by switch or by a remote control – see more here <http://www.electricalcounter.co.uk/products/switches+&+sockets/retrotouch>.

The retro look is definitely in evidence with the switch being surrounded by a glass surround and a chrome trim with the fixing screws being totally concealed. The black finish gives that modern and interesting appearance and will fit in superbly with any modern household décor. The Electrical Counter finds the finish to be of a very high quality and exceptionally different in appearance and a blue glow that is given out to allow the user to locate the switches in poor light completes a very modern effect.

The Electrical Counter notes that the operation of the [Retrotouch RTS Touch and Remote Light Switch](#) is by a simple one touch operation or by a means a hand remote system. The remote operation of the switch

is an area, which will no doubt increase over the future years, as there is a definite movement to the total remote control of nearly all operations with the louse or office. This is an ideal system for old as well as young as the remote can operate through walls so that it is possible to turn on the lighting system in any room prior to getting there which of course makes moving from room to room safer. The Electrical Counter have seen that there is a trend to change the lighting systems as the day progresses from the sharp high quality lights that are required earlier in the day to the subdued lighting that is more favourably used as bedtime approaches and the remote allows easy transfer of lighting patterns.

The Electrical Counter is also please to supply the Retrotouch RTS switch with a full dimming capability so that the lighting can be changed up or down according to the requirements of the occupants of the room.

The Electrical Counter is pleased to be able to supply the full range of [Retrotouch RTS switches and sockets](#) for fitting throughout the house. This means that there can be a uniformity of appearance throughout the house to match that of the remote controlled switch units in the major parts of the house. There is a full range of matching switches, which have a rocker switch instead of the remote and one touch operation and there is also a range of electrical sockets to match so that the whole of the building can be changed to give the retro look throughout the place. The most inviting colour is black as this gives a superb finish but they can also be sourced in white.
