November 21, 2013, 10:36 am -- [/EPR NETWORK/](#) -- Lamp Post Electrical have great pleasure in promoting the Elnur range of Storage Heaters. Storage Heaters were once the poor relatives of the heating area as the cost of gas became so much cheaper than the electrical or oil equivalents. In those days storage heaters were limited in their operation and ability but today there has been a whole new range of storage radiators which compete very fairly with the modern gas systems in certain areas and there is a great potential for their further growth in the market. Lamp Post Electrical and Elnur have some of the best and can supply them quickly.

Lamp Post Electrical are delighted to stock the full Elnur Storage Heater range as this is a company which has spent a lot of time and effort in developing some of the best storage heaters on the market. The quality is excellent and the performance is surprisingly good and the latest storage heater is a far cry from the heaters of old and the cost of operation is quite competitive.

Storage Heaters now have a number of niche areas where they dominate the market and Lamp Post Electrical and the [Elnur Storage Heaters](#) have risen to the challenge. Apartment living is a major area for storage heaters as there are many areas in large populated apartment blocks where gas has been excluded because of the fire and explosion dangers which are magnified when there is such close proximity between residents. Also the apartment rental market is ideally suited to the installation of a storage heater heating system as it is easy to control by the landlords and easy to use by the renters. This market used to have to pay extra for their heating costs but today the storage heater has improved so much that the heater can be heated at night by cheap electricity on the white meter and discharged the following day and night. Lamp Post Electrical are amazed at the insulation of the latest Elnur Storage Heaters which ensures that the natural heat loss

from the storage heater is very small which makes almost all the input heat available to heat the room. The emission of the stored heat is now expertly maintained by digital temperature controllers to ensure correct room temperature.

Lamp Post Electrical can supply all the Elnur range of heaters including the top of range fan controlled storage heaters which can bring the room up to temperature quickly and keep excellent control through the evening. The controllers can be linked to a central control to work exactly as a gas or oil fired system with set periods for heating in the morning and evening. Whilst the cost of use is slightly higher than gas the cost of installation of a storage heater system is very much lower than a gas fired system and the total cost when averaged over the life of the systems is very similar.

Lamp Post Electrical - <http://www.lamppostelectrical.co.uk> - is pleased to help with any inquiry about the Elnur Storage Heater and supply all the information to get the right sized heater for the job concerned just send an email.
