**Univedant** develops Knowledge Management Solution for Manufacturing Industry

Chicago, Illinois

Over the years, manufacturing companies have invested millions of dollars on multiple technologies and software tools for their engineering departments, in order to realize productivity gains and stay ahead of the competition. Unfortunately, in most cases there is little or no interaction between various tools deployed for automation of various engineering and business functions, thus creating process and workflow related challenges. Additionally, maintenance and upgrade of IT applications aggravates the challenges further in term of costs overheads.

Manufacturing companies are functioning in a globally competitive landscape that demands constant innovation. In order to overcome the challenges, manufacturing organizations have realized a dire need on more knowledge sharing and collaboration, so that entire organization can collectively contribute towards innovation activities.

**Univedant** has developed a customizable Knowledge Management Solution, **UniKMS™** that leverages existing investments and delivers a cutting edge **Knowledge Management System (KMS)** for the entire organization.

According to **Girish Vedpathak, CEO & President of Univedant**, "Knowledge Management Systems are not a one-size-fits-all solution as client specific customization is required to capture the user preferences, workflows and the business dynamics of an organization. We are confident that **UniKMS™** will help clients expand on existing knowledge base and collaborate on a real-time basis towards knowledge sharing and continuous innovation of products".

**UniKMS™** helps manufacturing companies build knowledge base, facilitates real-time collaboration and leverages existing IT investments. This in turn helps companies develop and implement innovative ideas right from product conceptualization to production, and retain the long-term sustainability of core in-house expertise.

**About Univedant Corporation**  
**Univedant** is a member of multiple technology and manufacturing forums and active participant in industry events across the globe. **Univedant** offers comprehensive suite of solutions and services in Mechanical Engineering and Information Technology space specially geared towards manufacturing industry.
