

# Downtown Miami business produces 100% of it's electrical power from the sun!

Released on: March 6, 2008, 8:39 am

Press Release Author: **Dr. Dennis Antoine**

Industry: [Energy](#)

**Press Release Summary: Sun Electronics, a leader in solar integration and design, is now harnessing the power of the sun at its downtown Miami headquarters.**

Press Release Body: **(Sun Electronics, Miami FL) Sun Electronics** has placed 129 solar panels on its rooftop which provides 23kW of power with their grid tie system. The system allows Sun to supply all of it's daily electrical needs, sell any overage back to the utility, and provide long term independent power in case of a long term power outage.

*"Americans must take responsibility in helping themselves to the enormous opportunity that solar energy can supply" says **owner and President John Kimball.***

**John Kimball** started working in the **solar business** in 1973, in Tucson, Arizona at the age of 21. Kimball started the **Tucson Energy Center** in 1973, worked in three U.S. Congressional offices including U.S. Representative Morris K. Udall, Arizona; U.S. Representative Phillip Sharp, Indiana; and U.S. Representative George Brown Jr, California. Following several years working on solar energy in Washington, he went to work for Arizona Governor Bruce Babbitt's Arizona Solar Energy Commission. He then worked as a sales engineer for Photowatt, Photocomm, and Kyocera America.

For 35 years Kimball has been helping dealers and customers in the design and promotion of solar and renewable energy systems, back up, and independent power systems worldwide.

Sun ships worldwide, and the company projects sales exceeding 15 million for 2008.
