

Immaculate Tile Flooring with Builder Superstore

Released on: September 11, 2008, 12:27 pm

Press Release Author: Tom Klein

Industry: [Construction](#)

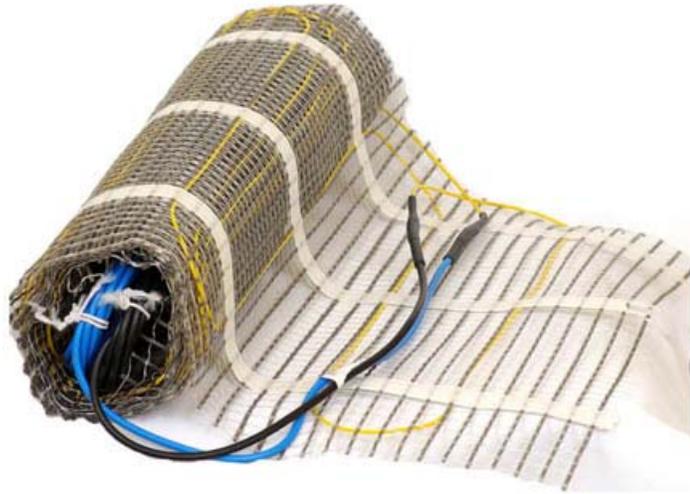

Press Release Summary: **Builder Superstore launches a new underfloor heating product to help your tile floors feel luxuriously warm. Also see the ultra grout and adhesive range to add the finishing touches to your amazing new floor.**

Press Release Body: The first thing to consider when tiling the floor of any room in a home is to **pick the right size of tiling** to fit in well with the overall size of the room itself. Of course, tiling comes in all shapes and sizes and this is something that is **imperative to get right** before you proceed with the tiling of a room. Generally speaking, tiling can be found in sizes varying from 1" up to sizes of around 2 feet so, it's safe to say, you should be able to find a variety of [tiling](#) to suit; whether it is the bathroom, living room or kitchen floor that they are tiling. It goes without saying that they don't want their choice of tiling to overwhelm the room completely which it is always a good idea to do research and speak to tiling experts beforehand who will be well versed in finding the right sort of tiling for all manner of rooms within the home.

Heat From the Floor Up

The installation of green technology doesn't need to be restricted to just renewable energy. High efficiency systems such

as underfloor heating require significantly less energy to heat a space than traditional methods. Scandinavian building techniques have used both wet and dry systems for many years and the UK needs to catch up as they are missing a trick! Combining low energy input and intelligent distribution of warmth is what makes energy work longer for less. When powered by a renewable energy source it achieves tip top energy efficiency for the household and the environment. Customers can potentially heat their home for years to come for little or no on-cost. Builder Superstore provide [underfloor heating](#) heating systems for domestic purposes currently however there are wet systems coming online in the near future. Current systems work on both wooden and concrete sub-floors and can be installed under any tiles.

Tiling - The Importance of Matching Décor

Few things can derail the style of tiling more than it being a mis-match with the décor that is chosen for the room. **The décor of a room should be one of the first considerations when it comes to tiling a room.** For example, if a room has a decadent feel, then tiling that complements this is necessary. Similarly, if a room is striving for a minimalist feel, there would be little benefit from installing highly [intricate tiling](#) that may well look out of place in a room that is designed with simplicity in mind. Tiling is all about complementing the features of a room and it is simple to find a variety of tiling that will more than meet customers' needs.

Tiling - How to Maintain Tiling

Tiling is a fairly simple material to maintain and [ceramic tiling](#) is **invariably the easiest sort to keep looking ship-shape**. Tiling can be made to keep its [clean](#) and shiny surface for many years with the simplest of cleaning regimes and, in order to create the best visual impact, it is very important to keep tiling looking spick and span. That's why we at Builder Superstore bring you the best tile maintenance products with our ultra grout and adhesive range.
