

Live Testing For Radon In Granite

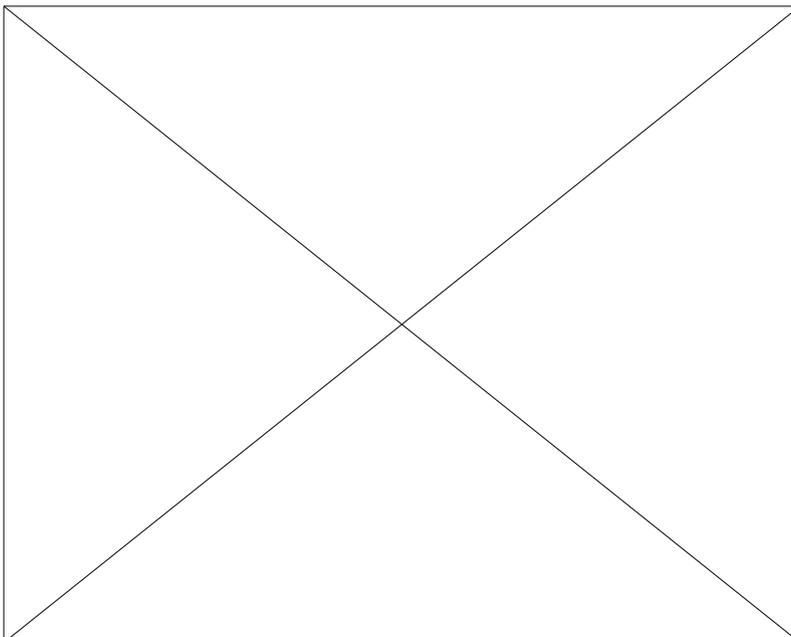

Released on: September 8, 2008, 3:20 am

Press Release Author: [Natural Stone Restoration Alliance](#)

Industry: [Environment](#)

Press Release Summary: Who strive to ensure the safety, as well as the satisfaction of all customers? The National Stone Restoration Alliance is ready to put radon in granite accusations to rest with live webcam testing.

Press Release Body: As you are probably very aware, there have been on-going accusations that have been consistently made against natural granite products having the ability to cause cancer, because of the high levels of radon that they have been said to produce. These accusations have been going on for quite a while, and it is time to put them to rest.

Who better to accomplish this, than professionals who strive to ensure the safety, as well as the satisfaction of all customers? **The National Stone Restoration Alliance** is ready to put accusations to rest. **Josveek Huligar**, a proud

member of the **NSRA** is willing to conduct a very important test in his own home. This is a test that can ultimately change the world of granite, as we know it.

Huligar plans to have the very slab of granite, which was said to be 'hot' and to have contained radon, installed in his own home. The entire process will be on camera no less, for the entire world to see. Before the slab of granite is to be installed, samples will be taken, and the air will be tested in the home, as described by the EPA, and then sent to be evaluated by **AirChek** (www.radon.com), to check for traces of radon and radiation. When this test is complete, the granite will be installed, and then his home will be tested once again to check the levels of radon and radiation. You can monitor this entire process yourself on a public web cam at www.nsrweb.com

The slab being used for this test has been provided by **Mr. Tim Scarlata of Atlantic Granite & Marble** (www.atlanticgranite.com), located in Rochester N.Y. After searching extensively to find the perfect slab for the test, Scarlata was able to locate two slabs of granite that did in fact produce higher than normal readings of radiation. Atlantic Granite & Marble will also be fabricating and installing the counter top while on video for the public to view.

There have been some individuals who have spent large amounts of money on not only the installation of natural granite in their homes, but then they have turned right around and paid tons more money in having the granite removed because of the scare that has been put on society with the radon issues. Huligar, being in the business of ensuring customer satisfaction and quality, also takes this issue very seriously, because the health and well being of his customers are at stake. He plans to do everything possible to ensure the continued safety and reliability of **NSRA** customers.

You could certainly be seriously hurt, or even killed if granite were to fall on top of you, but at this time, this is the only way that has been proven to cause harm to anyone.

It is believed that the radon scare is nothing more than marketing strategies, and it has done exactly what it was intended to do, and that is cause fear of using granite in the general public. Huligar and associates of **NSRA** do not believe this to be true. However, he knows how important it is for the public to see that he stands behind the good name of **The Natural Stone Restoration Alliance** and their objective to supply clients with the natural beauty of stone, and that

every effort will always be taken to do so in a safe manner. To further put the public's mind at rest, solutions to any unfavorable characteristics have already been found.

This test is vital to the natural stone industry, and Huligar is ready to stand up to the test to prove that granite is not harmful to the general public. People need to be able to see these accusations called upon.

The Natural Stone Restoration Alliance (NSRA) has already done their own research, and released their information that looked at both past and present studies, as well as the marketing strategies used by manufacturers that birthed the scare of radon in the home. The findings of this research are quite simply that levels of radon have no significant difference when granite has been installed in a home.

Do not let yourself fall into the trap of letting unproven fears cost you hundreds of dollars, find out the truth yourself by watching the web cam at Natural Stone Restoration Alliance | Home, and let this door be closed once and for all. Viewers can also comment on the research that is being performed at <http://www.nsraweb.com/forums/news-5/live-testing-kitchen-radon-before-granite-9010.html> The set up and testing of the hot slabs starts 9/6/2008 at 10am.
