Industry: [Computers](#)

**Press Release Summary: SecureAuth reinforces CA SiteMinder's security with certificate-strength protection, with the ease of username and password**

Press Release Body: CA WORLD 2008, LAS VEGAS, NV, November 18, 2008 — MultiFactor Corporation, an innovator in [2-factor authentication](#), [web application security](#) and [SSL VPN authentication](#) solutions today announced it has joined the CA Technology Partner Program as a provider of strong user authentication services. CA SiteMinder customers will now have the added security of MultiFactor's SecureAuth, a convenient user authentication solution that lets organizations quickly and securely vet the identity of any user.

*"By offering direct integration of SecureAuth into CA SiteMinder, we extend the SecureAuth security and benefits to CA's SiteMinder customers, while keeping the total costs down to a few dollars per user, per year," said **Craig Lund, CEO of MultiFactor Corporation.** "These days real security at the lowest possible cost is the top customer priority."*

CA SiteMinder Web Access Manager users can now securely sign on using only username and password through SecureAuth's Direct integration into CA SiteMinder. The benefits of the integration include ease of use of a standard username and password but with strength of full X.509 authentication, all in a frictionless user environment.

*"SecureAuth provides critical strong authentication capabilities for SiteMinder customers. The easy to implement integration leverages SecureAuth for a tokenless, non-phishable authentication scheme which can be used to protect both new and existing web resources. In today's age of increased security, this integration ensures that access is restricted to authorized users and also helps to protect your company brand and customer retention,"* said **Todd Clayton, President and CEO of CoreBlox**, the leading CA SiteMinder integration company.

In addition to user friendly username/password validation, SecureAuth features a unique, variable certificate expiration option that gives the enterprise additional flexibility in setting their authentication parameters.

#### **About MultiFactor Corporation**

MultiFactor Corporation is pioneering the delivery of the strongest, proven [2-factor authentication, web application security](#), IPsec and SSL VPN security methodologies in an easy-to-deploy, low-maintenance product called SecureAuth™. This tokenless, browser-based authentication solution generates and validates client- and server- side certificates without PKI. SecureAuth represents the evolution of a technology that, for more than two decades, has remained the de facto standard for identity and access management technology. More secure than hardware or software tokens, SecureAuth is inexpensive to acquire, deploy and manage. MultiFactor Corporation's innovation and its development of real-world security solutions draws from a diversified team of cryptographers, network and Web application specialists and certified security engineers.
