

# New Finding by The Men's Choice Proved Six Men's Health Products Ineffective

Released on: November 24, 2008, 7:16 am

Press Release Author: <http://www.themenschoice.com/>

Industry: [Healthcare](#)

**Press Release Summary: The growth on the numbers of men's health products is alarming. Most of these products are advertised to help men in providing solutions to most dysfunctions faced by millions all over the world. However, numerous products do not deliver what they are supposed to as advertised.**

Press Release Body: **The Men's Choice**, the leading provider of independent reviews on men's health products, conducted another series of reviews on six different products. From the study, products did not receive much favor from users and were proven ineffective in addressing the need of men.

Some of these products contain natural ingredients believed to help men increase their sexual desire and resolve erectile problems. However, despite the formulation, most of these enhancing products fail to resolve men's sexual problems including erectile and other dysfunctions. Users of these supplements and medications are providing negative feedbacks about the product for failure to provide the needed enhancement.

The following are the reviews provided by the company:

**Enzyte** - [Enzyte](#) contains all-natural ingredients that researches show could help boost sexual desire and solve other dysfunctions on men. Active ingredients include Korean red ginseng root, Ginkgo biloba, pine bark extract, L-arginine, and horny goat weed extract. These ingredients are commonly found in most male enhancing products sold in the market today.

Korean red ginseng roots are known to enhance sexual endurance and stamina. Enzyte does not contain Yohimbe which is present in other enhancing supplements. Yohimbe is a major component in other supplements that helps resolve male impotency.

**Extend** - [Extend](#) is a male supplement advertised to increase the size of the penis and extend sexual life. Distributed under Nice Price USA, Extend is believed to offer the same effect with Magna RX. The distributor has several lines of male enhancing products including gels and pumps.

The product contains Pygeum Africanum and Pumpkinseed, Epimedium and Oat Straw, Oriental Ginseng, and Cayenne. Similar to other products from other manufacturers, Extend is formulated to include ginseng to help extend sexual life and endurance.

**Extenze** - [Extenze](#) is formulated to enhance blood flow to the penis and provide stronger and long lasting erection on men. It contains Yohimbe that is widely used in most enhancing products to cure impotency and erectile dysfunctions. Other ingredients included in the product are Tribulus Terrestris, Oat Straw, L-Arginine, Saw Palmetto, Catuaba, Aphrodisiacs Muira Puama, Maca. All combined to give men a boost in their sexual functions.

**Ezerex** - [Ezerex](#) is an expensive diet supplement formulated to solve pre-ejaculation problems encountered by most men. It contains ingredients that are proven to enhance sexual desire and provide stronger, firmer, and long lasting erection on men. Ingredients added to the product include Ginger Root, Korean Ginseng, Yohimbe, Cordyceps, Bombyx Mori, Horny Goatweed, Schizandra Berry, Vitamin B3, and Rehamannia Root.

Horny Goatweed (Epimedium) is present in most male enhancing products and is believed to help solve impotency and offer increase in sexual desire.

**Maxoderm** - [Maxoderm](#) is unlike other male enhancements taken orally. Maxoderm is a cream solution applied directly to the penis to provide the desired result. It is recommended to be applied by the sex partner while masturbating for a better result. The product contains Methyl Salicylate, L-Arginine, White Nettle Extract, Catauba Extract, Maca Extract, and Peruvian root.

Several users of this product complained issues with regard to itchiness experienced by their partners during intercourse.

**Paravol** - [Maxoderm](#) is a supplement that helps the body's production of testosterone and seminal fluid thereby increasing sexual drive and stamina. The increase of testosterone level helps prolong sexual life and counters the effects of natural andropausal period on man. It contains ingredients including: Horney Goat Weed, Avena Sativa, Muira Puama Herb, Stinging Nettle, Tribulus Terrestris, Maca, Long Jack, and Sarsaparilla.

Paravol, though formulated with organic substances is still proven to be ineffective for use by most men who have tried the product. Others continue to claim that they do not feel any result after maintaining the enhancement.
