Press Release Summary: Celerant Named as a Validated Payment Application Provider Press Release Body: Staten Island, NY (December 15, 2008) – Celerant Technology, a leader in the retail software industry, received confirmation that the company has been named as a Visa and PCI Certified vendor and is now included in Visa's list of Validated Payment Applications.

*"We are very proud to be recognized as a PCI Certified vendor," stated **Ian Goldman, Celerant President and CEO.** "Our software has been tested and re-tested to confirm adherence to the regulations required by the PCI Council. We consider it is important to provide our clients with peace of mind and security by ensuring that sensitive card holder information is kept private and have worked diligently to achieve this certification."*

The PCI Security Standards Council has a set of standard regulations that vary, depending on the size of the merchant. Before a merchant or vendor can be Visa certified, the **PCI Council** verifies that these regulations are met by reviewing the results of independent, third party tests of payment processing applications. After the testing is complete, the vendor or merchant may be qualified for certification.

According to the Overview of PCI Requirements, "PCI security standards are technical and operational requirements set by the PCI Security Standards Council (PCI SSC) to protect cardholder data." It goes on to say, "The standards apply to all organizations that store, process or transmit cardholder data—with the guidance for software developers and manufacturers of applications and devices used in those transactions."

As a certified provider of payment processing software, **Celerant Technology** is now able to present an even more advanced solution to its clients. By providing a payment module that has been empirically tested by third parties, **Celerant** ensures that merchants are receiving software that meets the standards of the PCI Council. For more information on the **PCI Security Council** and its regulations, go to www.pcisecuritystandards.org. To view the complete list of Validated Payment Applications as of November 15, 2009, visit http://usa.visa.com/download/merchants/validated_payment_applications.pdf.

About

Celerant

Technology

Celerant's Command Retail is an advanced real-time retail management system, which manages all areas of retail including POS, Inventory Management, Warehouse, Distribution Center, Allocation, Multi-Channel/E-Commerce/Kiosk, Data Mining, and Back-office, in a single, integrated system. Our advantage is the flexibility of our Java platform, allowing Celerant professionals to conduct cost-effective analysis and adaptation based on the individual needs of each retailer. The result is a better system that meets the needs of retail businesses and gives them the tools to take Command of their success.
