Press Release Summary: MultiFactor's flagship product SecureAuth® integrates seamlessly with the Juniper IVE

Press Release Body: IRVINE, CALIF., January 14, 2009 - MultiFactor Corporation, an innovator in 2-factor authentication, web application security and SSL VPN Authentication solutions, today announced that it has joined the Juniper Networks J-Partner Solution Alliance Program. MultiFactor's flagship product SecureAuth® integrates seamlessly with the Juniper IVE to provide the best network security any two-factor authentication system can offer.

The combined Juniper SecureAuth solution is a true user self-service enrollment model for secure network access. The simple to use click-through interface reduces support calls and administrative overhead traditionally associated with strong dual-factor authentication. SecureAuth is deployed as an appliance in the enterprise network and utilizes existing user data-stores, such as Active Directory, removing the need for a separate database for your two-factor authentication solution. SecureAuth eliminates the need for administrative resources to deploy software or hardware tokens, make upgrades or train end-users on complex remote access procedures.

In today's extended enterprise ensuring user identity prior to granting network access is a vital component to a comprehensive enterprise security initiative. SecureAuth multi-factor authentication solution offers direct native integration into the Juniper product suite as well as a Juniper SAML offering.

"We are very excited to offer SecureAuth for the industry leading Juniper IVE product line," said Craig Lund, Chief Executive Officer, MultiFactor Corporation. "This partnership provides true certificate strength user authentication in a browser based solution for only a few dollars per user per year."

About MultiFactor Corporation

MultiFactor Corporation is the leader in strong, simple to use, user authentication. SecureAuth is a true plug-n-play authentication mechanism that allows secure access into the enterprise network and application resources. Enabling the enterprise to cost effectively harness the true power of the network. Please visit <http://multifa.com>
