Industry: [Internet & Online](#)

Waveform Technology is now offering two months free server colocation for unemployed workers who want to start or expand a business.

With the unemployment rate in Michigan continuing to rise, there are plenty of smart, talented individuals from information technology who are now out of a job. Waveform Technology is encouraging those people to take their great Internet start up ideas and form new companies to rebuild Michigan's economy.

Waveform's Data Center, located in Troy Michigan, is now accepting servers for colocation through the new Start program. With Start, new companies can bring servers online quickly and have no worries about data center fees for the first two months.

Parishpilot.com will be the first organization to take advantage of Waveform's Start program. Parishpilot.com provides low cost Internet services to Detroit churches, including websites and E-mail. "I'm tired

of jobs leaving Michigan,” said Bill Wilson, who founded parishpilot.com after twelve years in the information technology industry. “I’m going to become part of the solution and start something that can help Michigan grow. I’m proud to join forces with Waveform on this.”

Data centers are where start ups begin. Flexibility and reliability are always important when selecting a data center, but cost is also key for new businesses. With Start, Waveform Technology will provide trusted colocation for start ups and a helping hand in tough economic times.

Colocation is the hosting of user owned servers in a data center to take advantage of superior Internet connections and other support systems such as backup power. Colocation is excellent for developing start ups because they have complete control over their machine, there is no sharing of server resources or conforming to the provider’s preferred software installations.

Participants are eligible as long as they can provide proof of unemployment. Interested parties should contact Waveform Technology through the website, <http://www.michigan-colocation.com>, or by calling 1-866-Waveform.

About Waveform Technology, LLC

Waveform Technology is a Michigan based data center operator and metro Ethernet provider. Waveform’s Troy data center is a world-class facility, featuring Liebert cooling and uninterruptible power systems, along with backup generator support, unmatched connectivity, and advanced security. Tenants of all sizes colocate in Waveform facilities. Waveform Technology is a privately held company in operation since 1992.
