Lakewood, CO (November 30, 2010) — [ZAP Engineering and Construction Services, Inc.](#) (ZAP ECS), a leading full service engineering and construction management company serving the gas processing, pipeline, field services, petroleum, refinery, chemical and alternative energy industries, names Carl Soderman as President to manage the firm's substantial team growth experienced over the past year and lead the firm into the future.

"Carl comes to our business with the experience needed to navigate ZAP's evolving business expansion in a full range of professional services.," said Steve Tzap, CEO of ZAP ECS. "His strong track record in operational efficiency and growth, combined with an emphasis on quality and customer focus will be the key assets to driving the continued success of our business."

Soderman joins ZAP Engineering and Construction Services, Inc. as a recognized leader in engineering and operations with over 30 years of experience in the natural gas industry. His responsibilities have included engineering management, operations management, project development, project management and operations engineering. In directing groups in a leadership role, responsibilities have included asset planning and development, asset optimization, acquisition and merger due diligence and integration, and project delivery.

"ZAP's business model is built upon client representation and personal attention as the foundation to the company's philosophy. Monitoring the investments our clients allocate to each specific project is a key element to the "partners in business" commitment at ZAP," commented Steve. "Soderman has broad management experience in executive and leadership positions across a wide range of commercial, operational, and quality functions, as well as familiarity with the ZAP organization."

Prior to joining ZAP ECS, Soderman was Northern US Process Manager with Enerflex Energy Systems, Ltd., a division of Toromont Industries, Inc. (TSX: TIH), an international company delivering products, services and integrated solutions to all corners of the world, focusing on the natural gas industry. After graduating from University of Texas of Austin in 1979 his exceptional career background progressed from Project Engineer with Brown and Root to Manager of Operations, Process Engineering Manager to Vice President of Engineering with DCP Midstream.

"I am excited at the opportunity to lead the ZAP ECS organization," said Carl Soderman. "The firm's portfolio of services has tremendous recognition in the market. The challenge ahead is to leverage that awareness and continue to develop innovative products and services that the market demands and our customers expect."

About ZAP Engineers and Construction Services, Inc.

Founded in 2001, ZAP Engineering and Construction Services, Inc. (ZAP ECS), located in Lakewood, Colorado is a full service engineering and [construction management](#) company serving the gas processing, pipeline, field services, petroleum, refinery, chemical and alternative energy industries. From engineering and design to project controls and construction management, ZAP ECS brings decades of expertise to the

gas processing industry and related-energy companies. The diverse backgrounds of our project team allow ZAP ECS to bring focused knowledge to unique processes including gasification technologies, power generation and methanol/ethanol production. ZAP has been recognized in the HOT 500 in 2006 and listed three consecutive years in the top 5000 awards 2007-2009.
