July 20, 2012, 10:11 am -- [/EPR NETWORK/](#) -- Stockport based Force8 Windows and Doors is pleased to announce the launch of its brand new range of Bi-folding aluminium doors.

'We feel justifiably proud of the look and finish of this latest product development for us that compliments our popular aluminium window selection' says Dennis Sumner, MD of Force8.

Aluminium has for many years been the material of choice for high end architects and discerning home owners and the Force8 range of [Bi-folding aluminium doors](#) certainly doesn't disappoint.

The slim line profile of the new aluminium bi-folds makes these doors very pleasing on the eye as the homeowner can enjoy an outlook that is less hindered unlike many of the thicker PVC or timber profiles so that more of the outside view can be seen.

Bi-folding doors, which is just one type of [composite door](#), are extremely versatile with their concertina style operating system and have capabilities of aperture openings of several metres wide which make them extremely popular with larger properties and the door of choice for house extensions and sun rooms.

The extruded aluminium used in the fabrication of the doors is lightweight which makes it ideally suited for the larger sized doors but it is also exceptionally strong.

A high level of security is ensured across the range of bi-fold doors as standard as all doors are fitted with multi-point locking systems as standard

The beauty of aluminium is also enhanced with its low maintenance requirements. Simple soap and water and a gentle wipe with a damp cloth is all that's needed to make the doors look good as new for many years to come following their fitting.

Aluminium has received some quite negative publicity in the past and had lagged behind other materials for its thermal efficiencies. Customers are very conscious of the environment and demand the highest possible thermal efficiencies which has also been mirrored with government legislation that has been passed in recent years following the Kyoto Agreement in 2005. However, aluminium is no longer just the pretty face of the door industry and has more than caught up with other materials in terms of its U values and thermal properties.

All doors within the range are expertly fabricated by the highly trained team at Force8 and are finished with double glazed argon gas sealed units with toughened glass to comply with all building legislations.

Force8 is a fully FENSA registered and approved company and has exceptional standards in quality across all its products and levels of customer care, with a range of doors and windows including [fire doors](#) and [triple glazed windows](#) available, customers can now add aluminium bi foldings to the mix.
