

Premier Environmental Expands Portfolio with Prestigious New Clients

Lancashire, United Kingdom, 2016-Aug-15 — /EPR Network/ — The UK's Leading Residential & Commercial Insect Screen & Fly Screens Supplier Announces Completed Projects for United Utilities and the Saudi Royal Family

Britain's leading name in high quality, high performance insect and fly screens is proud to announce the completion of a further two high-profile projects. Having already earned an impressive and varied international client list, Premier Environmental has recently worked on properties belonging to both the Saudi Royal Family and United Utilities.

Premier Environmental specialises in bespoke pest control solution for domestic, commercial and industrial properties alike, along with fully comprehensive installation services. Endorsed by dozens of blue chip companies and hundreds of satisfied customers, Premier Environmental is continually expanding its portfolio with increasingly impressive accomplishments.

The Saudi Royal Family

"The order was to supply bespoke and stylish [fly screens](#) to cover the opening windows in the £300m London household. The screens had to be effective, yet unobtrusive and aesthetically pleasing. The solution was to install over 90 of our Prem 40 roller type fly screens throughout the house. After looking at a number of suppliers our screens were chosen because of the build quality, guarantee's and that we have been supplying screens for over 25 years. They were so happy with the final installation that another three households belonging to the prince have had our screens installed." – Premier Environmental

One of the brand's most impressive accomplishments to date, the team was recently hired to work on the London residence of the Crown Prince of Saudi Arabia – a property with an estimated value of £300 million.

The challenge was to tailor a bespoke solution, which along with providing outstanding protection from insects would also not detract from the aesthetic and elegance of the incredible building.

Not only was the team successful, but the Saudi Royal Family was so pleased with the job, they re-hired them to work on another three extraordinary properties.

United Utilities

"Flies are an obvious problem around waste water treatment plants, with very small owl midges and drain flies, and until recently the on-site offices had air conditioning installed in them. With a commitment to an absolute reduction in Carbon emissions by 26%, United Utilities were looking for new ways to keep the offices cool. In order to be able to open the windows and let fresh air in to keep the offices cool rather than using air conditioners our [roller fly screen system](#) was chosen for the opening windows as it offered the versatility of keeping the flies out in summer and being almost invisible when retracted." – Premier Environmental

Over at United Utilities, fly screens from Premier Environmental were installed on a trial basis as a means by which to both protect workers from insects and cool the interior of a water treatment plant. The trial was so effective that the screens have since been rolled out to the entire network of United Utilities plants nationwide – another incredible endorsement for Premier Environmental.

The company offers comprehensive domestic fly screen manufacturing and installation services as well as those for commercial and industrial clients.

About Premier Environmental:

Premier Environmental is the UK's leading name in the production and installation of superior-quality fly and insect screens. With over 25 years of experience and an extensive list of high-profile clients, the team behind Premier Environmental has earned an international reputation for going the extra mile and exceeding expectations. Just a few clients to have offered their full endorsement of the brand include Cadbury, Morrisons, The National Trust, the Saudi Royal Family, Kingston College, P&O Ferries, Gatwick Airport, Harvey Nichols, the Savoy Hotel and many more besides.
