Smart Scale Co. Unveils World's First IoT Smart Scale Container, "Stashaweigh™", at New West Summit

Illuminated Container
Easily view contents

Stealth Security
No display or buttons. With Stashaweigh, users can manage their contents of their Smart Container, discreetly with their phone.

Dimensions and Material
6" x 2"
Luxury acrylic that was designed to feel like an Apple product in the user's hands

Smell and Water Proof
Users can be confident that whatever they choose to hold in their Smart Container is kept secure and won't be compromised.

Smart Scale
Highly accurate digital scale that users control via their Bluetooth-connected smartphone app for precise weighing.

Power
Lithium Ion Battery to easily recharge the Smart Container

Oakland, California, USA, 2018-Oct-10 — /EPR Network/ — Smart Scale Co. announced today its October 11th launch at New West Summit of the world's first IoT smart scale container for the cannabis industry. The patent pending "Stashaweigh™" is an industry-forward weighing device that utilizes the ease of Bluetooth connectivity via a smartphone app to make tracking and saving your cannabis history seamless.

Stashaweigh™ is the brainchild of inventor and entrepreneur Josh Lee, Founder and CEO of Smart Scale Co., which he created in 2017. Lee, in conjunction with a team of technology engineers, has a vision for smart data-sharing, powered by machine learning and advanced AI, that he hopes will shake up the cannabis market.

Lee recalls, "As a technology inventor I saw a lack of technology being built for the cannabis market that matched what was out in the mainstream marketplace. I chose to build the most technologically advanced stash container, the Stashaweigh™, a patent-pending IoT device that integrates a smart scale, connected smartphone app, and water and smell-proof container to manage your usage history by weight, day, time and strain."

Stashaweigh™ allows its users to track and manage usage history through their smartphones, and gives accurate weight, date, and time feedback while storing precise dosage history during each session. The company will use machine learning and AI to track and predict user habits from around the country that give dispensaries, growers,

scientists, and medical professionals tools to more accurately respond to consumer needs and trends.

"Our goal is not only to give consumers a secure device to store their cannabis, but to help them learn more about their usage habits, while giving them tools to manage their cannabis like never before. We are thrilled to launch our product at New West Summit, the industry-leading cannabis technology conference."

Stashaweigh™ is the first container in a line of expected smart scale devices that make using, selling, prescribing, and growing cannabis smarter and more effective.

The sleek new scale will debut on October 11th and should be available for purchase by the end of 2018.
