

GenieMD to Feature Award Winning AI-based Telemedicine Platform at HIMSS19

San Francisco, CA, 2019-Jan-24 — /EPR Network/ — GenieMD will be exhibiting at HIMSS19 in Orlando, Florida February 11-15, 2019. The GenieMD team will be showcasing their iVisit Telemedicine platform. GenieMD's award-winning Telemedicine platform, driven by an AI engine, assists in the patient's triage allowing for a streamlined consult with their physician through its HIPAA compliant text messaging, video visits and question-based asynchronous visits.

Patients are demanding convenience, expanded access and lower cost of health care. Doctors are overwhelmed with simple cases which take up most of their consult time. Clinics are struggling to manage costs in light of their patients increasingly use of alternative channels to seek treatment. To address these challenges, technology companies are innovating new ways for patients to gain access to providers. Government regulators are responding more favorably to the use of these methods including Telemedicine. Therefore, Telemedicine adoption is growing at a rapid pace.

"At GenieMD, our mission is to help improve the quality of human life by providing solutions that enable people to live healthier and longer." – Dr. Soheil Saadat, CEO

The company offers a wide range of products and services designed to democratize healthcare globally.
